

Assignment#5

Course Title: Web Programming

Student name: Kravchenko Marina

(E-mail Address) : marinaekravchenko@gmail.com

Student ID: 23012857

Due date: **2nd May, 9:00pm**

Create a mini game using HTML, CSS, and JS. You can come up with new ideas for the game or re-implement existing ones.

I created a game based on flappy bird, but instead of bird I have a head of my dog. Its name Cubic, so name of game - flappy Cubic

“Guide the flapping dog through a series of pipes without touching them. The longer you keep the dog flying, the higher your score!

Tap space, button up or X to make the dog rise. If you stop clicking, the dog will fall due to gravity”

Link to github: https://github.com/marinkaavia/flappy_cubic

Link to web-site to try a game online: <https://ornate-starship-099837.netlify.app>

Frameworks:

- I used bootstrap **framework** for css, because it helps to organize columns and rows without difficult CSS settings
